

CONVEYOR LINES FOR CARTONS, BUNDLES, THERMORETRACTABLE MATERIALS

5.1 Multi system for vertical storage unit, elevator unit, "Acuvertical" model

ACUVERTICAL multisystem meets the requirements to reset plant shutdowns in the productive cycle and in the same breath to gain back precious square metres in your factory.

Currently companies face these problems with horizontal conveyors systems (for example transport roller clutches) which, however, take up a lot of working space.

ACUVERTICAL multisystem performs this task in the best efficient way thanks to its vertical development: it's an innovation that allows you to optimize the plant's spaces and to lower costs respect to the traditional accumulation systems. One of the most important distinctive features of ACUVERTICAL system is its contemporary utility, both in transfer mode (eg. Trucks) and in accumulate mode. Moreover each multisystem can move simultaneously different products coming from many lines.

TECHNICAL DATES

PRODUCT HANDLED:

PRODUCT SIZE:

SHELVES NUMBER:

TYPE OF SHELVES:

ACUVERTICAL CAPACITY:

PRODUCTIVE CYCLE:

Cardboard boxes, plastic packs, shrinks.

Minimum 150mm x 100mm

Maximum 2100mm x 400mm

From 12 to 24 units (according to height, lift height and product handling)

Comb or plate

In relation to the size of the object handled

Varies depending on the size product moved (from 12 to 100 per minute)
