

## CONVEYOR LINES FOR ENVELOPES, TINS, RECIPIENTS, JARS AND BOTTLES

### 24.1 Multi system for vertical storage unit, elevator unit, "acuvertical" Model

"Miniacuvertical" multisystem meets the requirement to reset plant shutdowns in the productive cycle in the area of preparing product (envelopes, cluster, bottles, flasks ecc) and in the same breath it gains back precious square metres in your factory. Now this problem is solved with pneumatic rejects installed on the line. They start working in case of shutdowns of production storing the extra product in a box. With "Miniacuvertical" this activity is fully automatized.
